

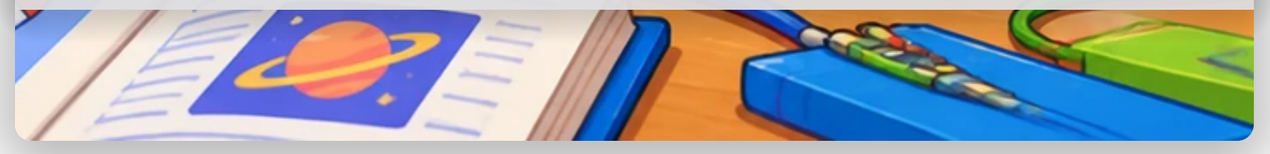
Suggiyaw's Good Habit

Roseann Duguit



Suggiyaw sits comfortably under a shady tree, completely absorbed in a fascinating book while his friends nearby play a lively game of tumbang preso. Sunlight filters through the leaves, highlighting the joyful focus on his face as he enjoys his favorite pastime.

Proud parents and teachers smile warmly as they watch Suggiyaw reading diligently at the kitchen table, surrounded by piles of colorful books. They share encouraging nods, knowing that his dedication to regular reading is building a bright future for him.

Holding an open science magazine, Suggiyaw eagerly explains fascinating facts about volcanoes and landslides to his wide-eyed friends. Everyone listens in amazement as he shares incredible details about how the earth works.

When the teacher announces a sudden science project about volcanoes, classmates rush eagerly toward Suggiyaw to invite him into their groups. The classroom buzzes with excitement as everyone realizes the value of his extensive reading.

Suggiyaw teams up with Saganay and Ebang, sitting together around a cozy wooden desk to brainstorm their upcoming assignment. They happily discuss ideas for building a model volcano and creating an informative poster board.

Suggiyaw shares photocopies of his favorite magazine articles with Saganay and Ebang in a sunny library corner. Together, they flip through encyclopedias and geographical texts to gather even more fascinating facts about eruptions.

Gathered in a brightly lit room at Saganay's house, the trio organizes their notes and carefully decides what vital information to include on their poster. Suggiyaw points to key facts about magma pressure, lava temperature, and crust formation.

Working busily at Ebang's craft table, the friends shape sturdy cardboard and mold brown and red modeling clay into a realistic mountain. Bright red clay cascades down the sides to brilliantly simulate flowing, glowing lava.

Proudly displaying their completed volcano model and detailed poster board, Suggiyaw, Saganay, and Ebang beam with joyful satisfaction. The intricate project showcases their dedication, teamwork, and late-night creativity.

Standing proudly before their beaming teacher, the three friends receive a glowing gold star and a perfect score on their outstanding science project. Suggiyaw smiles brightly, realizing that his wonderful reading habit has truly paid off.
