

Leo's Planet Power: A World of Good

Julie Søndergaard

Leo, a bright-eyed child, stands in his colorful backyard, looking up at the sky with a thoughtful expression. Birds chirp happily around him, and a friendly squirrel peeks from a tree. He wonders how he can make the world an even better place for everyone.

Leo visits a vibrant community center where a friendly grown-up explains about energy. They point to a big, glowing number 7 on a chart, representing 'Affordable and Clean Energy.' Leo learns that we need power for our lights and toys, but some energy can harm our planet.

Outside, Leo sees a house with shiny solar panels on the roof, sparkling under a cheerful sun. Nearby, a giant wind turbine spins gracefully in the breeze, its blades turning silently. He understands that the sun and wind can give us clean, endless energy without making the air dirty.

Next, Leo learns about 'Responsible Consumption,' represented by a swirling number 12. He sees a pile of colorful trash bins: blue for paper, green for glass, and yellow for plastic. The grown-up explains that throwing away less and recycling more helps keep our planet tidy and healthy.

Leo is at home, carefully sorting his juice box into the recycling bin, while his mom reuses an old jar for flowers. He also remembers to turn off the lights when he leaves a room. Every little action makes a big difference, he thinks with a proud smile.

Suddenly, Leo imagines a beautiful ocean, but he sees plastic bottles and bags floating sadly in the water. A worried sea turtle peeks out from behind a discarded plastic ring. This is 'Life Below Water,' number 14, and Leo feels sad that our actions can hurt ocean creatures.

Determined, Leo joins a group of friends and grown-ups at a sunny beach cleanup. They wear bright gloves and happily collect trash, making the sand sparkle again. A happy crab waves its claw from a newly clean rock as the ocean waves gently lap the shore.

Back at school, Leo draws a big picture showing solar panels, recycling bins, and a clean ocean. He excitedly tells his friends all about the three world goals and how they can all be 'Planet Protectors' too. His friends listen with wide, eager eyes.

Inspired by Leo, his friends start their own small projects. One friend helps their family put up a bird feeder, another starts a compost bin, and another reminds everyone to save water. The whole neighborhood seems to glow with new, positive energy.

Leo stands with his friends, looking out at a bright, clean, and happy world. The sun shines, the ocean sparkles, and green trees sway gently. They know that by working together, they can keep our amazing planet healthy and happy for everyone, now and in the future.
