

## Flash Forward's Fantastic Ride

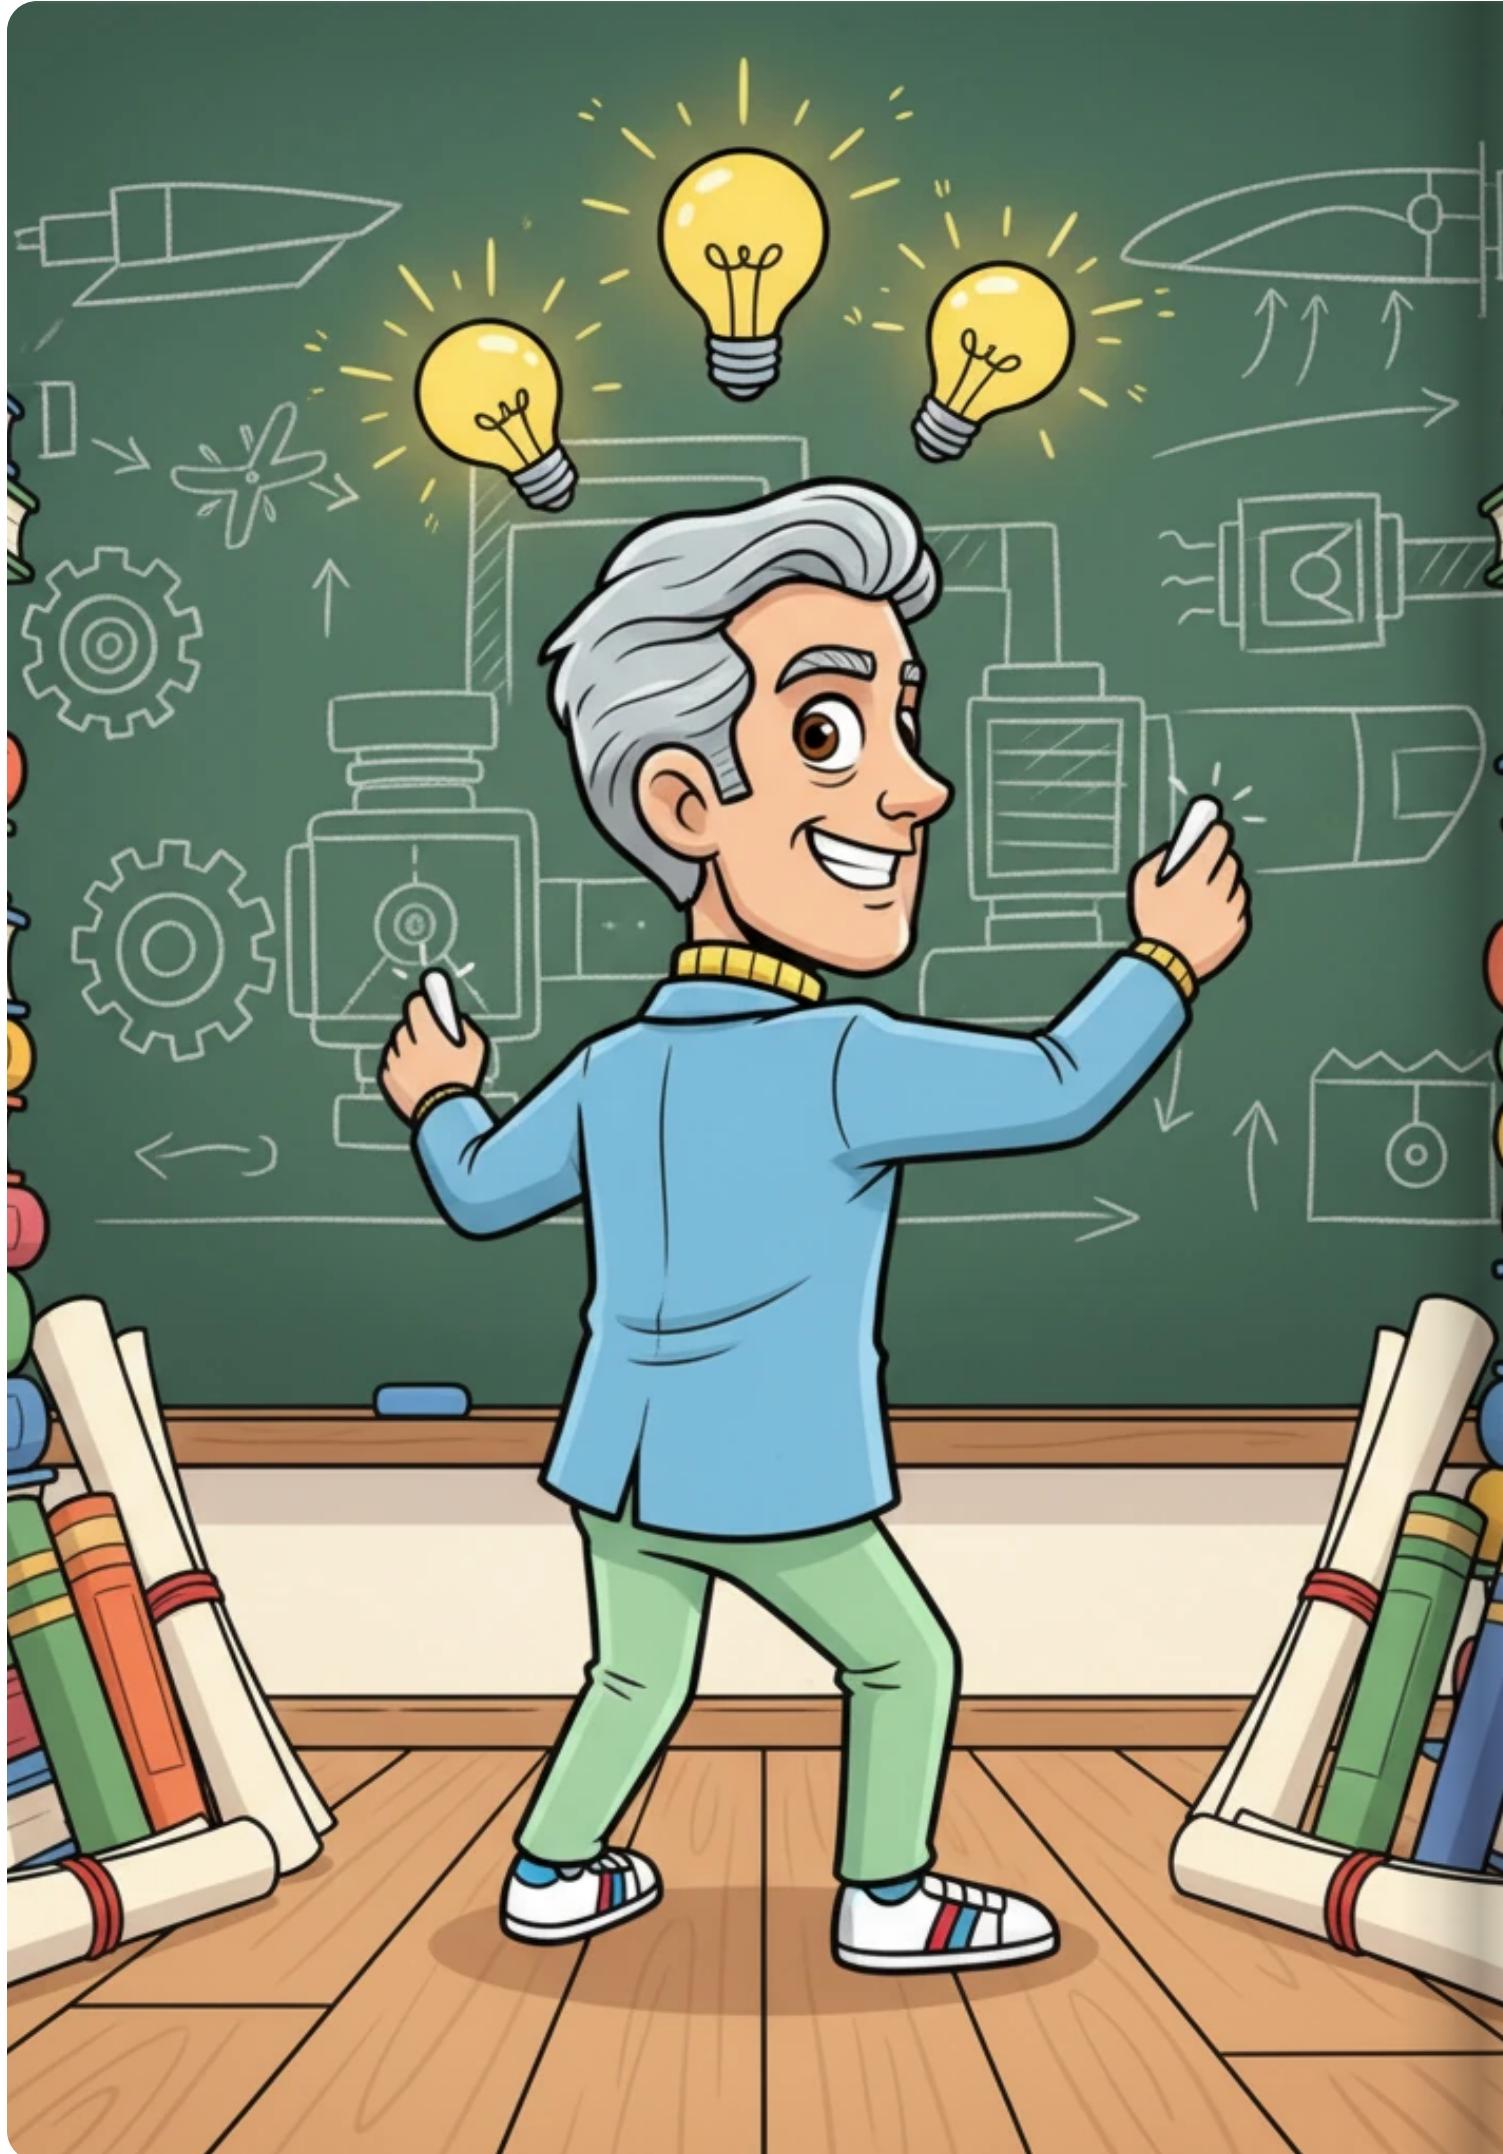

Paolo Bertolero

Young Flash Forward, a boy with bright, curious eyes and a wild mop of hair, sits in his backyard, sketching elaborate, swooshing cars on a notepad. Around him, toy cars of all shapes and sizes are scattered, some even flying on imaginary wings. He dreams of building the fastest, most fantastic vehicle the world has ever seen.

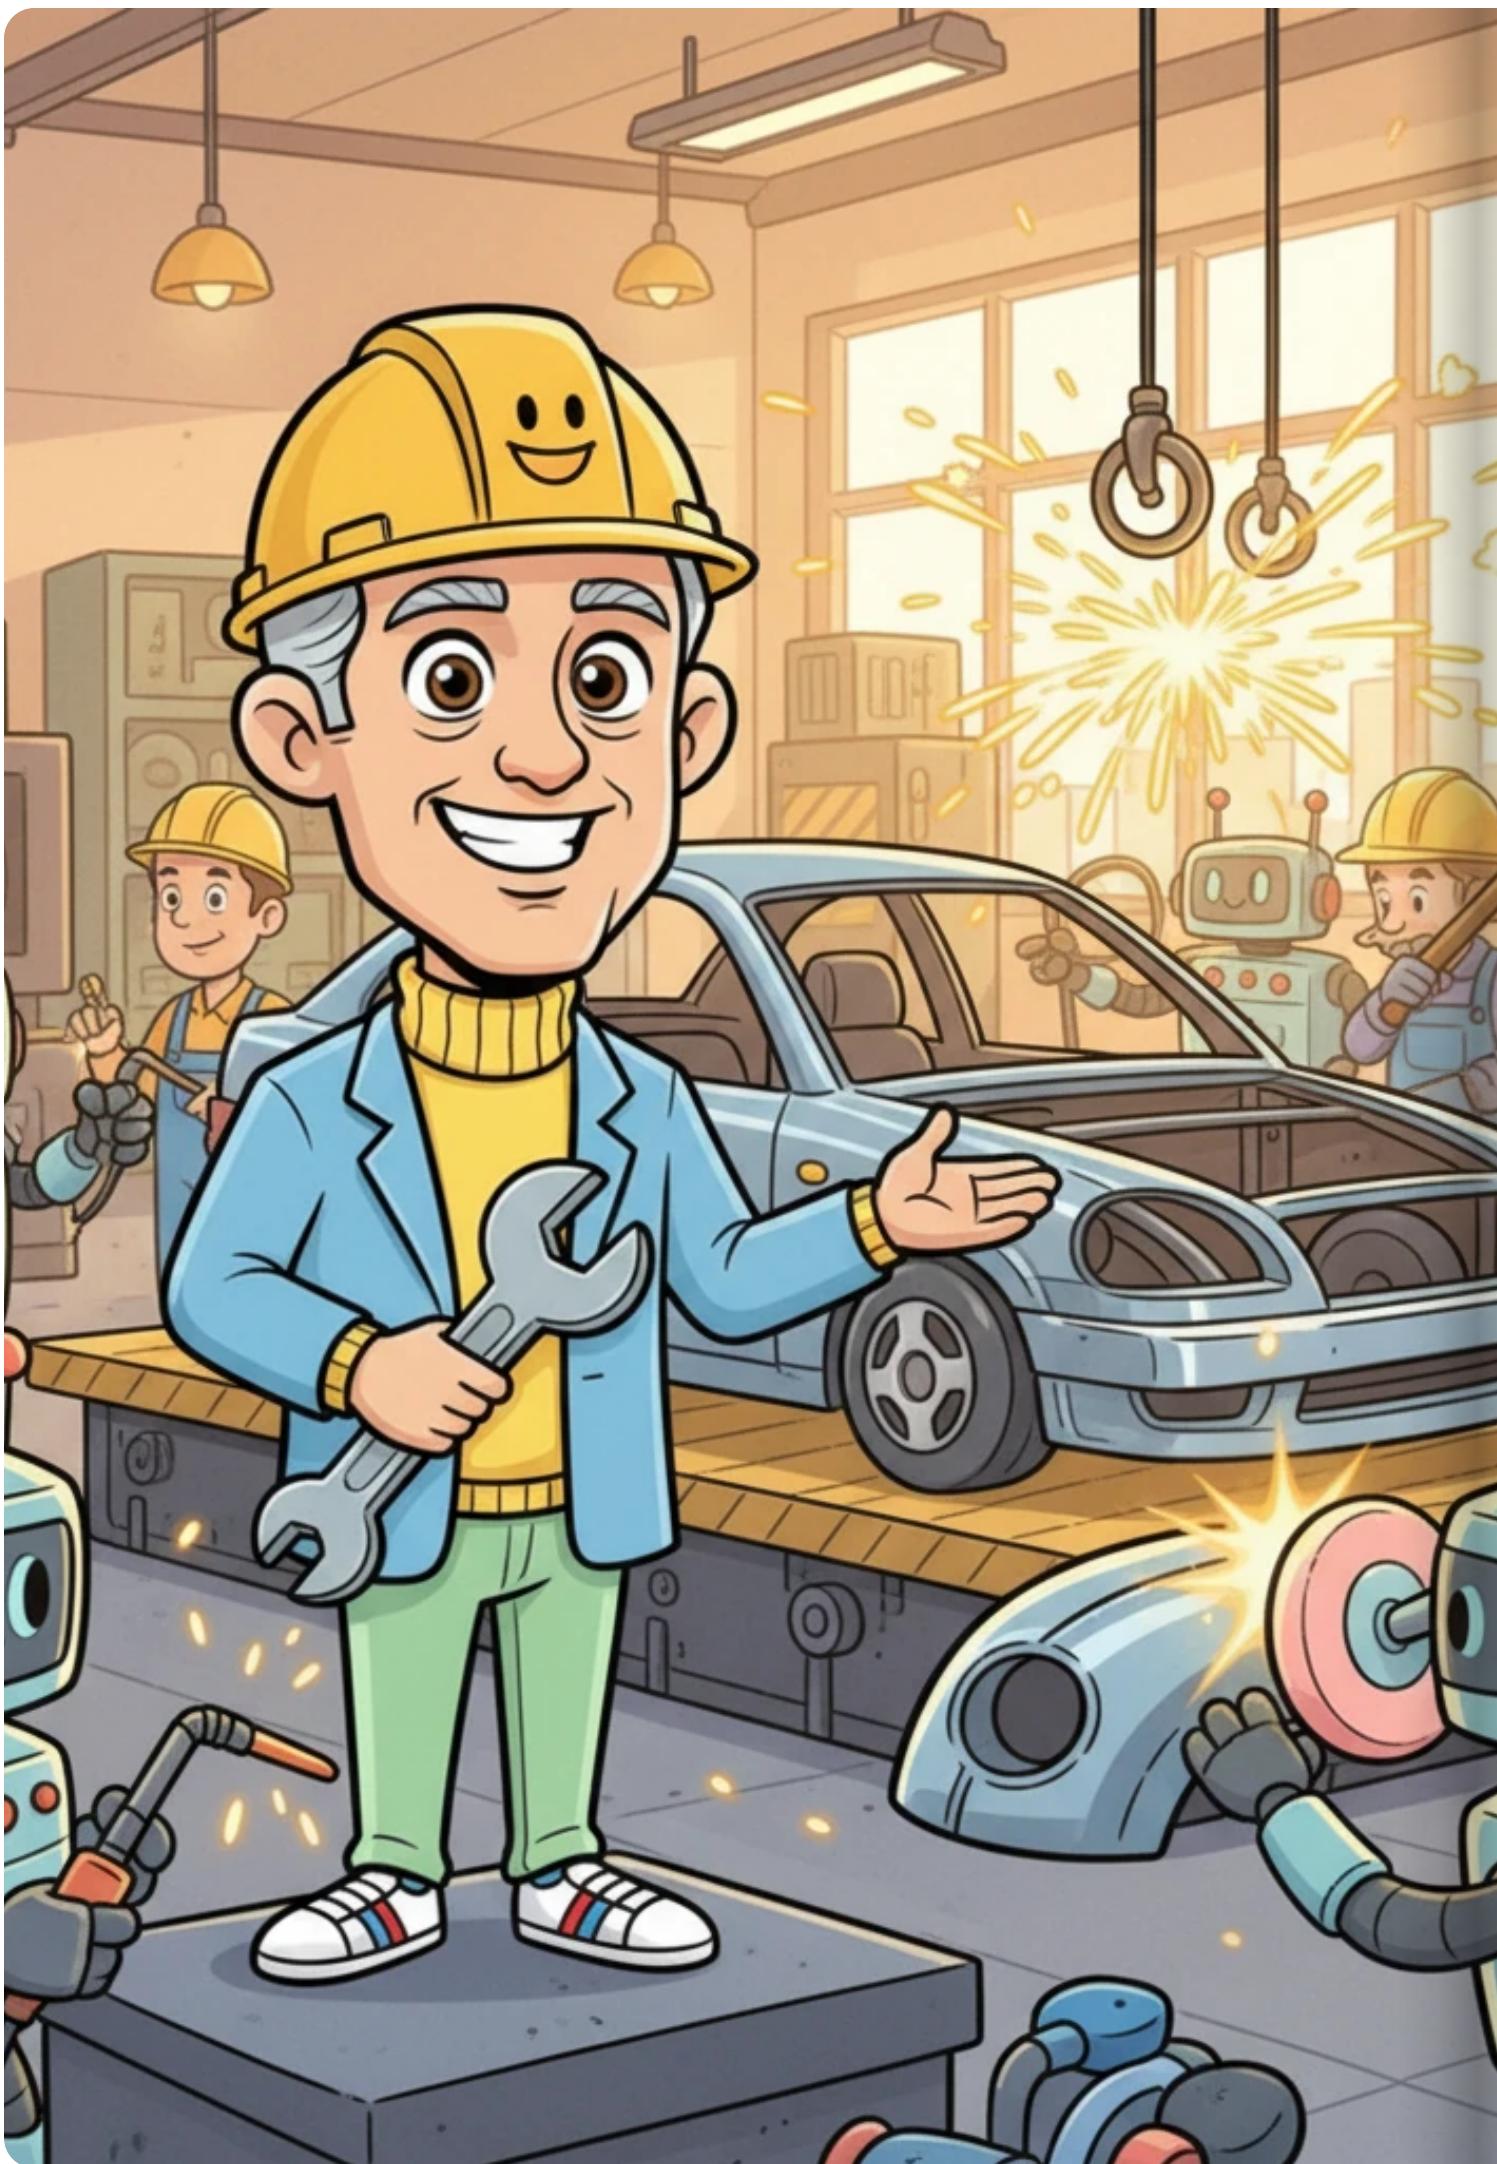

In a colorful, slightly messy workshop filled with springs, gears, and blinking lights, a slightly older Flash tinkers with a small, wheeled contraption. It's a wacky, three-wheeled scooter that puffs harmless, rainbow-colored smoke as it zips across the room. He grins, a smear of grease on his cheek, delighted by his first working invention.

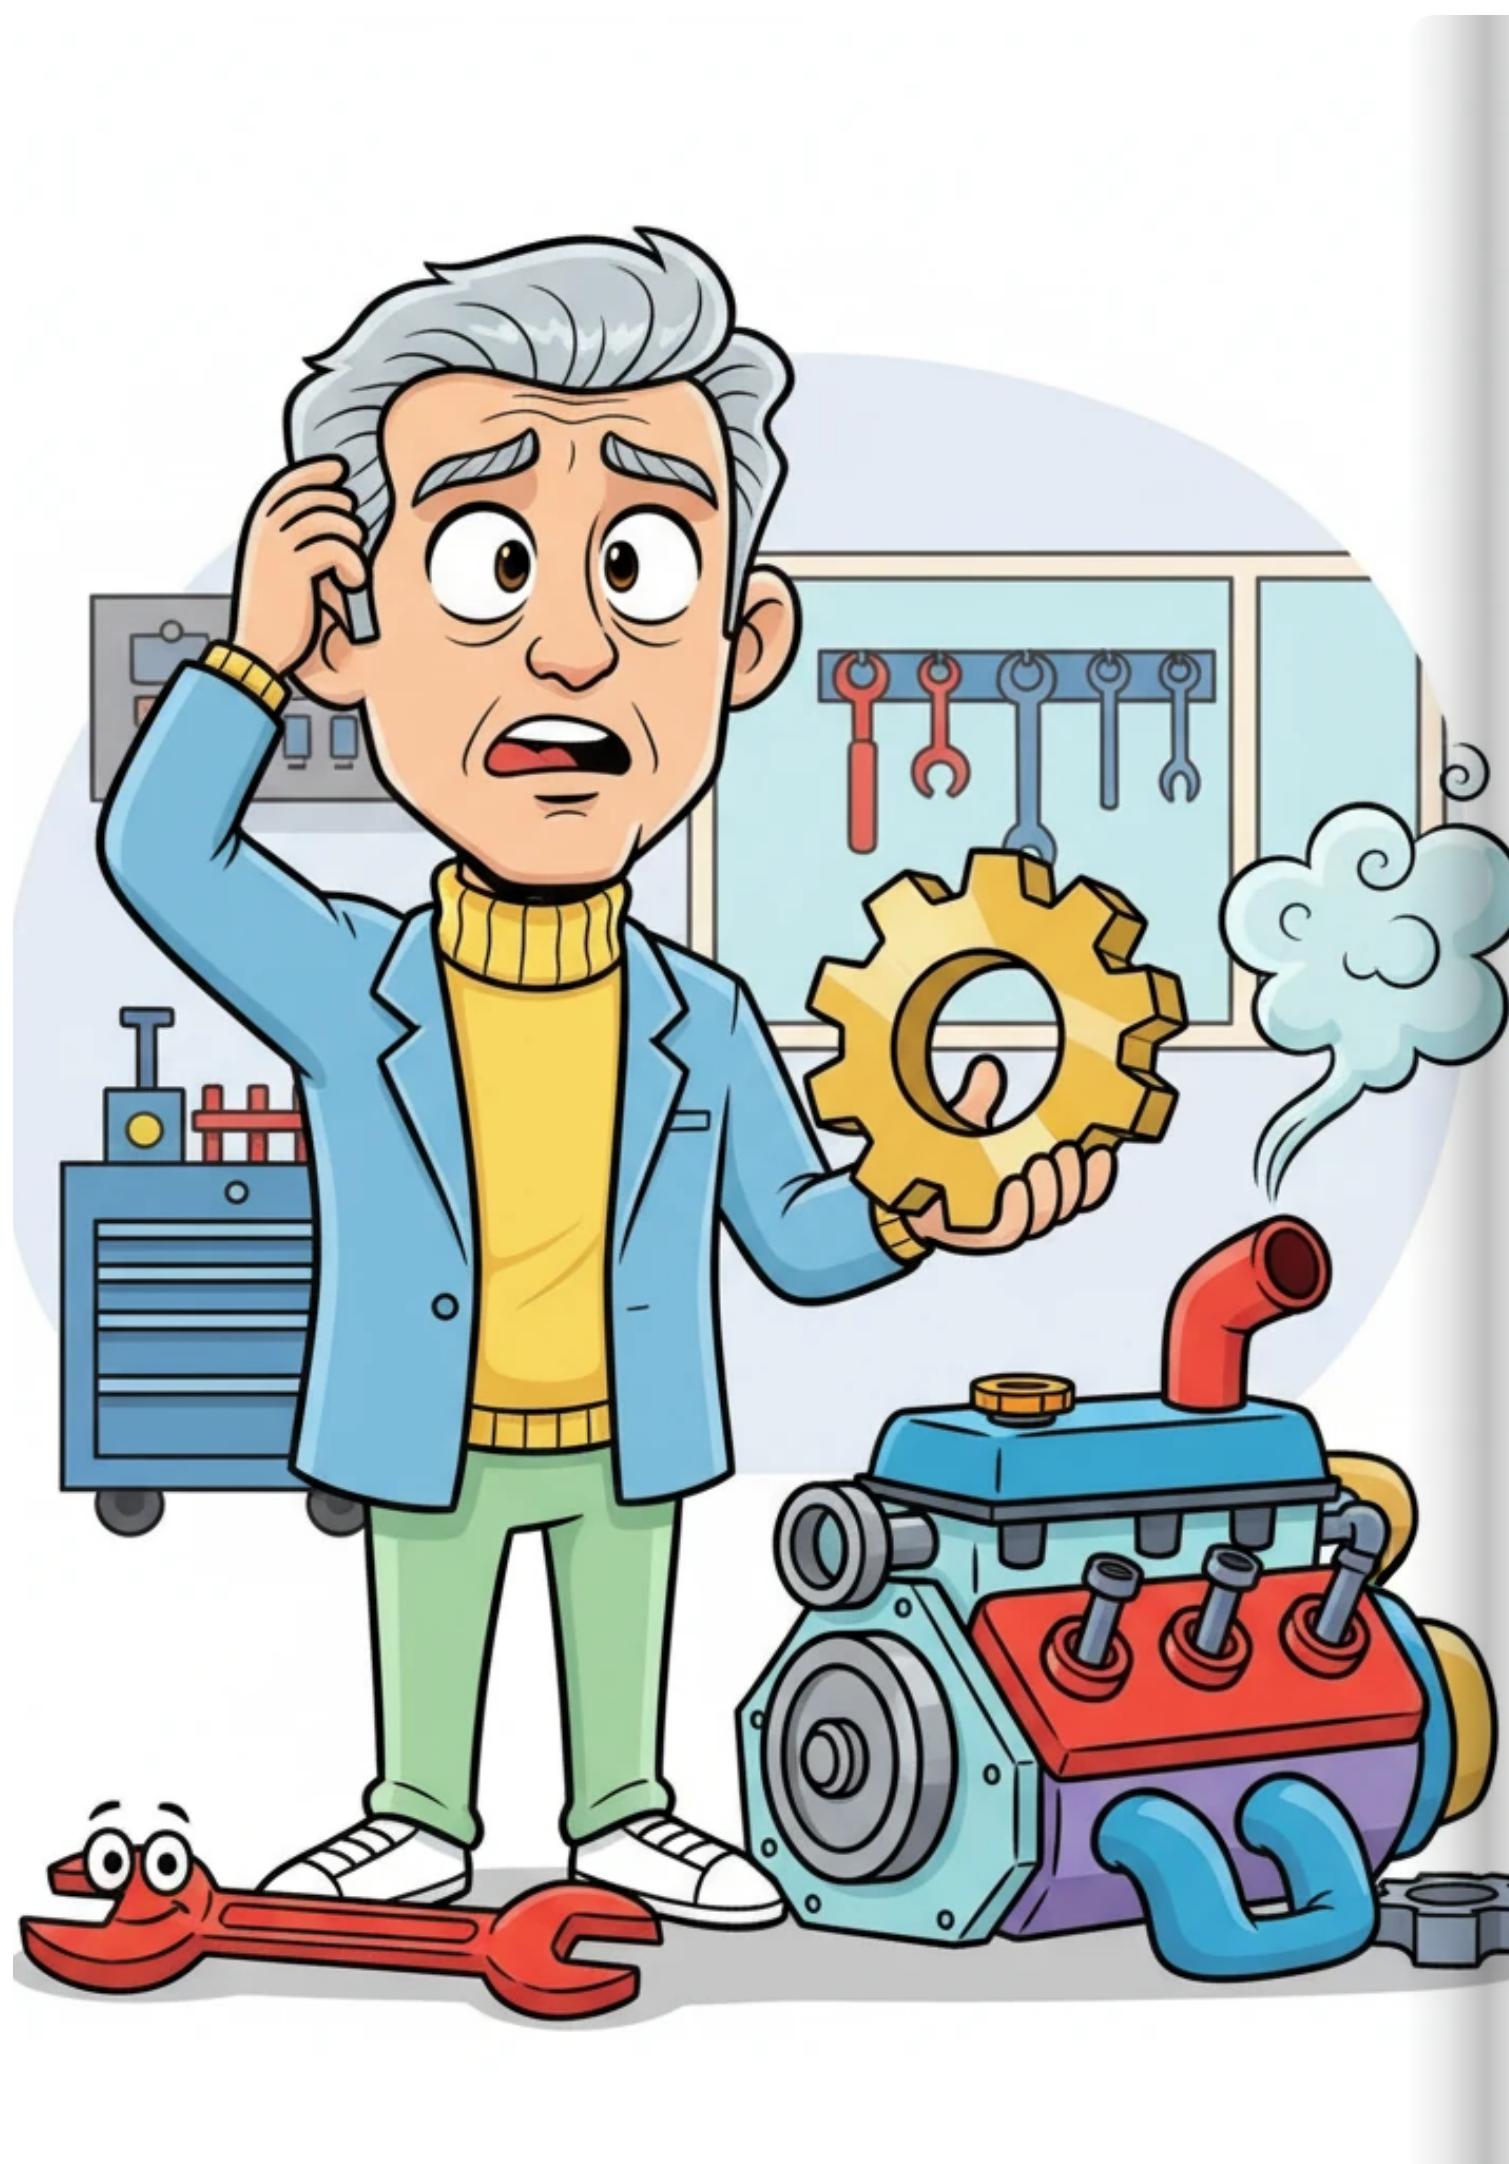

Flash, now a young man with a determined expression, is surrounded by stacks of books and blueprints. He's at a giant chalkboard, excitedly drawing complex engine diagrams and aerodynamic shapes, his mind buzzing with ideas. Lightbulbs literally pop up above his head, signifying his brilliant insights.

With a flourish, Flash unveils a large, shimmering blueprint of his dream car. It's a sleek, silver machine with gull-wing doors and a futuristic silhouette, unlike anything anyone has ever seen. His eyes sparkle with excitement, imagining it speeding down a road.

Flash, wearing a cheerful hard hat, is in a bustling, brightly lit factory, surrounded by friendly, cartoonish robots and busy workers. They are welding, hammering, and polishing pieces of the car, which slowly starts to take form. Sparks fly safely and playfully, adding to the energetic atmosphere.

Flash looks a little worried but still determined, scratching his head as a stubborn gear refuses to fit into the car's engine. A friendly, oversized wrench lies nearby, and a comical puff of smoke comes from a small, misbehaving part. He takes a deep breath, ready to solve the puzzle.

The magnificent car, gleaming silver with its distinctive gull-wing doors open like graceful wings, sits proudly on a rotating platform. Spotlights shine down, making it sparkle. Flash stands beside it, beaming with pride, his dream now a spectacular reality.

Flash is seen driving his incredible car down a winding, futuristic road, leaving a trail of shimmering stardust behind him. The car moves with incredible speed and grace, its sleek design cutting through the air. His hair is swept back by the wind, and he has an exhilarated, joyful expression.

Children and adults with wide, amazed eyes gather around the car, pointing and gasping in wonder. Flash, with a warm smile, is explaining how he built it, holding a smaller, toy version of the car. He encourages everyone to dream big and never stop inventing.

The iconic car is now soaring through the sky, not just on a road, but truly flying, leaving a rainbow trail. Below, a city skyline glows, and in the distance, a new generation of futuristic vehicles, inspired by Flash, can be seen. Flash's dream has not only come true but has also inspired countless others to reach for the stars.
