Sammy the Squirrel finds a golden key hidden under a pile of crisp autumn leaves in the Whispering Woods. The key has the number 100 engraved on it, and Sammy wonders how many more treasures are waiting to be found.

At the base of the Great Oak, Sammy meets Maya the Owl, who is organizing hundreds of acorns into neat baskets. Maya explains that ten groups of ten make one hundred, filling Sammy's mind with big, exciting numbers.

Sammy skips along the pebble path, counting out loud as he passes ninety-nine bluebells and reaches the milestone of one hundred. He feels proud as he masters the jump from two-digit numbers to the magical world of three digits.

Deep in the forest, Sammy finds a signpost with the number 456 pointing toward the sparkling stream. He practices identifying the place value, noting there are four hundreds, five tens, and six ones standing tall on the wooden board.

Beside the bubbling brook, Sammy helps a family of rabbits sort three hundred and twenty-seven colorful river stones. They arrange them in shimmering rows, making sure the hundreds, tens, and units are all in their proper places.

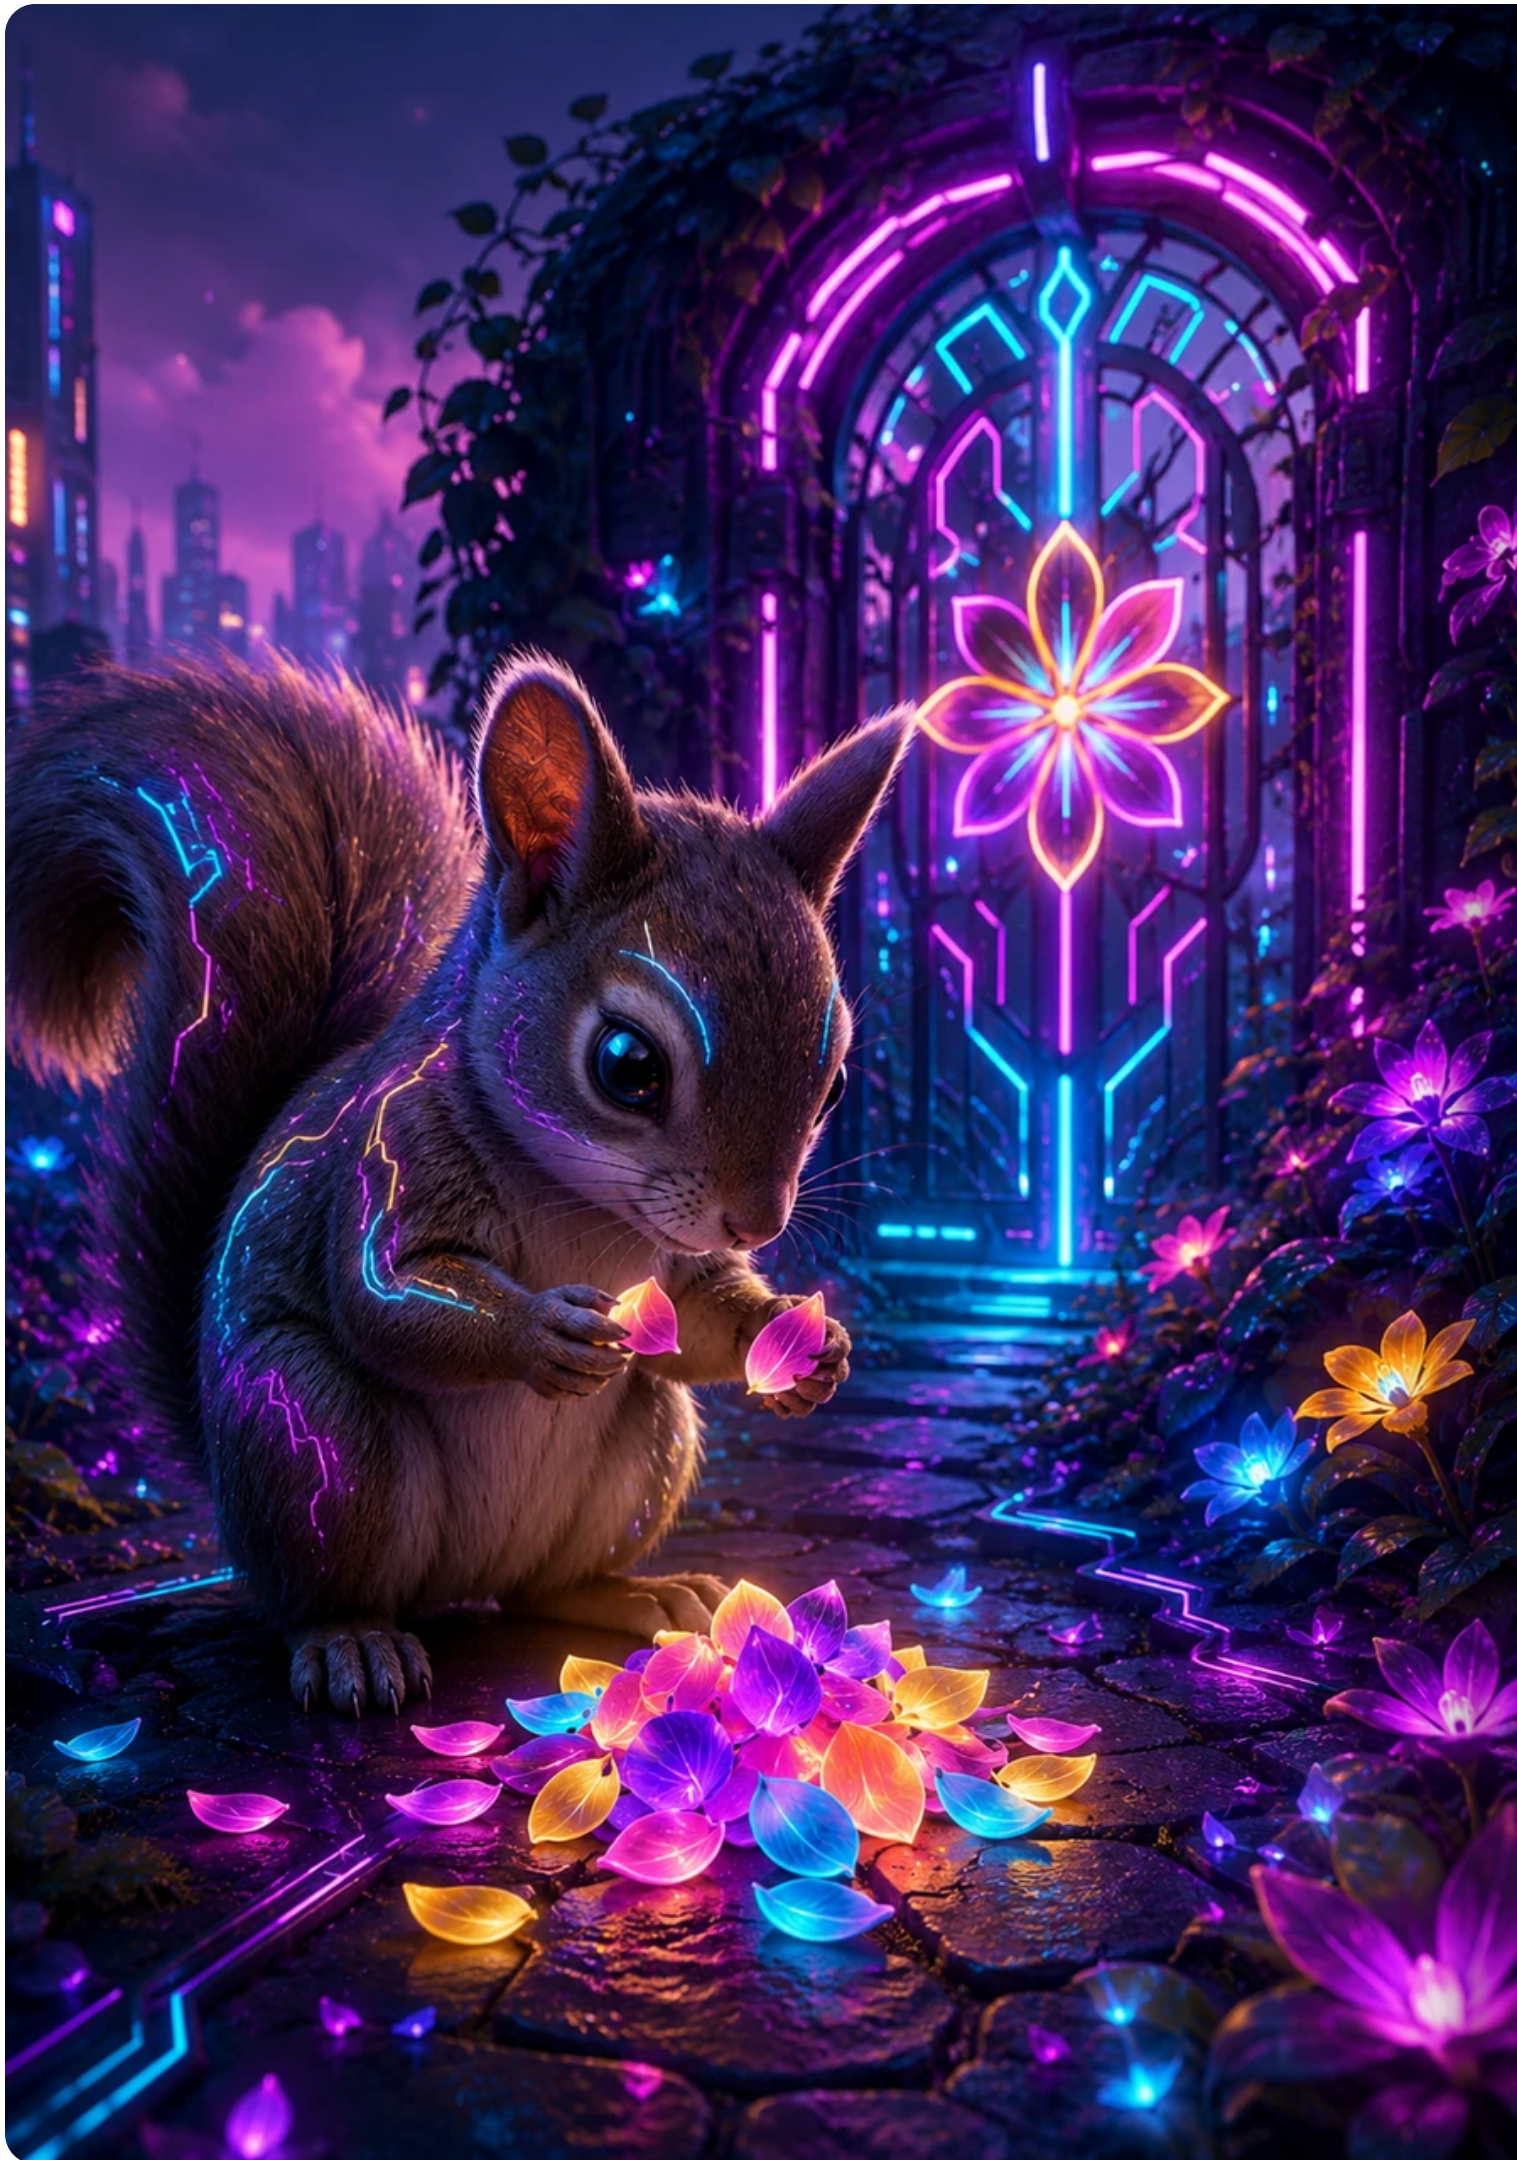

As the sun climbs higher, Sammy enters a meadow filled with seven hundred and eighty-two fluttering butterflies. He tries to compare the groups, learning that seven hundred is much larger than the fifty nuts he stored yesterday.

Sammy discovers a hollow log filled with ancient number cards ranging from 101 to 999. He spends the afternoon putting them in order from smallest to largest, creating a long, winding dragon of numbers across the grass.

Near the edge of the forest, Sammy meets a friendly fox who challenges him to an abacus game using bright berries on a vine. Sammy skillfully moves the berries to represent the number 920, showing off his understanding of zero as a placeholder.

As twilight settles, Sammy reaches the Secret Garden where the gate requires a code of nine hundred and ninety-nine petals. He carefully counts the last few flowers, realizing he has reached the very end of his three-digit number journey.

Tired but happy, Sammy tucks himself into his cozy tree hollow, dreaming of all the numbers he discovered. He knows that whether it is one or nine hundred ninety-nine, every number tells a special story in the woods.
