

EO - THE SHARD BEARER

The Boy with the Brightest Idea

Agape Reigneth Aquino

Leo lives in a small, quiet village where the nights are very dark because there is no electricity. He spends his afternoons in a tiny library, fascinated by old books that explain how the world works.

One evening, Leo watches his neighbors struggle to cook and study by the dim light of flickering candles. He realizes that a steady source of light would change everything for his friends and family.

Leo begins visiting the local scrapyard, looking for treasures among the discarded metal and plastic. He finds an old bicycle frame and some rusted wires, seeing potential where others only see junk.

Back in his small backyard shed, Leo clears off a wooden table to sketch his designs. He observes how the wind whistles through the tall grass and imagines a machine that can capture that energy.

The construction is harder than Leo expected, and his first few attempts to build a turbine fail to spin. Some villagers walk by and shake their heads, wondering why he is playing with trash.

A sudden rainstorm knocks over his fragile tower, scattering his carefully collected parts across the muddy ground. Leo feels a moment of sadness, but he picks up the pieces and looks closely at where the wood snapped.

Leo returns to his work with a new plan, using stronger materials and better knots to secure the blades. He spends every spare hour tightening bolts and testing the balance of his invention.

With the help of two curious friends, Leo finally hoists his tall, wooden tower into the sky. They all hold their breath as a gentle breeze begins to blow across the open fields.

As the sun dips below the horizon, the blades of the turbine start to spin faster and faster. A small light bulb connected to the base suddenly flickers to life, casting a warm glow over their surprised faces.

Now, the village square is lit every night, allowing children to read and neighbors to gather and talk. Leo stands tall next to his invention, proving that with a little grit and a big imagination, anyone can light up the world.
