

Class D's Smart Victory

Blessing DJODO TOMI

The Advanced Nurturing Academy was a school unlike any other. Here, students were evaluated on not just grades, but on their ability to think ahead, plan strategically, and solve problems with unique solutions.

Leo arrived as a new student, feeling small but observant in the grand hallway. The school was designed to push everyone to their limits, emphasizing intelligence and teamwork.

The headmaster announced a special challenge: a complex scavenger hunt across the expansive, modern campus. The first class to solve all the clues would receive special privileges and rewards.

Leo's class, Class D, immediately got to work, buzzing with energy. But they were confused, arguing over different interpretations of the very first riddle.

Leo, however, stood quietly, watching the other classes. He noticed Class A was already moving with calm precision, suggesting they had quickly deciphered the clue.

Instead of joining the chaotic group discussion, Leo focused on the clue itself, a coded riddle about shadows and reflections. He spent the next day observing the library's architecture.

The next morning, Leo found the next clue hidden behind a specific section of the library's glass atrium, right where the sun cast a distinct shadow. This was not a physical race; it was a race of wit.

He quietly shared his finding with his classmates, suggesting they change their strategy to focus on deep analysis rather than rushing. Skeptical at first, they decided to try it his way.

Class D began working methodically, analyzing clues instead of blindly searching. They decoded the next few riddles by pooling their observations and logical skills.

They arrived at the final location, a secret study room in the main tower, just as the sun set. Leo had already placed the final clue on the table, solving the puzzle not with speed, but with strategic, quiet observation, leading his class to victory.
